

6-MONTH PERFORMANCE REVIEW · PROBATION

Maintenance Engineer

NAVGAS Limited · Maintenance & Reliability (M&R)

February – August 2026 · Start date 9 February 2026 · Probation period 6 months

THE ARC OF THE FIRST SIX MONTHS

Four areas carried the first six months.

CMMS ownership, stores control, documentation and hands-on maintenance support — in that order of contribution.

01

CMMS / Ultimo

Raise and schedule work orders, create contractor PTWs, and follow up execution and closeout — now done independently.

02

Stores / Inventory

Reorganised the store, tagged 300+ items, started monthly reporting in April and keep consumables replenished.

03

Documentation

Maintain a traceable record of maintenance, inventory and project activity across Ultimo and the M&R shared folder.

04

Maintenance support

Support terminal maintenance, asset integrity, contractor supervision and troubleshooting across the site.

Overall theme: broader plant familiarity, stronger system ownership, and increasing readiness for independent routine maintenance.

What the role was set up to deliver.

Taken from the employment contract, the working job description and the assigned 2026 KPI framework.

ROLE BASELINE

Maintenance Engineer
Maintenance & Reliability
Department

CONTRACTED DUTIES

- Inspect and maintain operating equipment to schedule
- Maintain measurement accuracy through checks and calibration
- Manage and monitor maintenance contractors
- Troubleshoot and improve operations processes
- Support project / construction compliance inspections
- Ensure qualified contractor personnel are engaged

ASSIGNED OWNERSHIP & 2026 KPI THEMES

● CMMS / Ultimo	Work orders · PTWs · scheduling · follow-up · closeout · asset tree
● Stores / Inventory	Tagging · reconciliation · replenishment · monthly reporting
● Documentation	M&R shared folder · project records · PTW traceability
● Safety & Compliance	PTW · TRA · LOTO · SCE · contractor controls · audits
● Maintenance & Reliability	PM / CM execution · equipment reliability · integrity support
● Procurement	RFQs · requisitions · POs · maintenance material follow-up

Start date 9 February 2026

Probation 6 months

Basis Contract · working JD · 2026 KPI framework

From no prior Ultimo experience to daily CMMS ownership.

Work orders, permits, scheduling and follow-up are now raised and tracked without supervision.

3+

Work orders raised per week

Ultimo · since mid-March

5+

PTWs created per week

Ultimo · since mid-March

5+

Contractor jobs processed per week

Ultimo · since mid-March

Monthly

Work-order reporting and follow-up

Reporting cycle

WHAT I NOW DO INDEPENDENTLY

- Create and raise maintenance work orders
- Schedule maintenance activities
- Create permit-to-work requirements for contractors
- Follow up pending work orders and maintenance execution
- Support technical closeout and record visibility

DEVELOPMENT IMPACT

I started with zero Ultimo knowledge. The CMMS is now the system I use to control day-to-day maintenance, not one I need help to operate.

NEXT FOCUS

Close work orders promptly

Review redundant / obsolete orders

Evidence Ultimo work-order and PTW records	Basis of figures Weekly minimum since mid-March	Verifiable by Ultimo export on request
---	--	---

Spares can now be found, counted and replaced on record.

Reorganisation, tagging and monthly reporting turned the store from a room into a traceable system.

300+

Items currently in the store

Inventory records

~100%

Store items tagged for identification

Tagging register

April

Monthly inventory reporting started

Monthly reports

Ongoing

Consumable replenishment as issued

Stock records

ACTIONS TAKEN

- Reorganised store items for easier identification
- Tagged items and maintained inventory records
- Prepared and circulated monthly inventory reports
- Replenished consumables as items were issued
- Supported monthly reconciliation and stock visibility

OPERATIONAL VALUE

Spares can be located when they are needed, and the documentation behind them reduces the risk of a maintenance delay caused by an item that is unavailable or unidentified.

NEXT FOCUS

Support the Microsoft Dynamics transition

Evidence Monthly inventory reports, April onward

Also Tagging register · reconciliation records

Circulated to M&R, by email and shared folder

Maintenance information is accessible, current and auditable.

This is the area I am most self-critical about — the records exist, but capture is not yet immediate.

RECORDS MAINTAINED

- Ultimo work orders
- Permit-to-Work records
- Monthly inventory reports
- Procurement records
- Project / maintenance documents
- M&R shared OneDrive / folder

CURRENT CONTRIBUTION

I maintain a traceable record of maintenance, inventory and project activity across the systems and shared repositories M&R uses.

Monthly inventory reporting has been established and running since April.

Evidence: email + shared folder + Ultimo

IMPROVEMENT PRIORITY

Move from “upload when due” to “capture as produced”.

- Upload files immediately as records are generated
- Use a consistent naming and filing convention
- Explore practical automation for document capture and routing

Systems Ultimo · M&R shared OneDrive · email	Established Monthly inventory reporting since April 2026	Gap Capture lag between doing the work and filing the record
---	---	---

Broad hands-on exposure across terminal equipment and integrity work.

Executed, supervised or supported across three strands during the period.

● Equipment & maintenance

- 1 deadman valve replaced
- ~5 pressure gauges replaced
- ~2 limit switches repaired
- ~5 breakaway-pin replacements
- Most damaged lighting fixtures replaced
- Applicable PRVs calibrated

● Integrity & projects

- 2 pipeline sections tested
- T101 decommissioning / bolt replacement
- Corrosion-control activities supervised
- Denso tape applied to treated areas
- Temporary civil repairs at the loading bay
- Caravan store floor refurbishment supervised

● Routine engineering exposure

- Daily equipment condition checks
- Pumps, compressors and generators
- Remote-operated and relief valves
- Contractor maintenance across disciplines
- Troubleshooting of terminal equipment
- Growing ability to identify maintenance needs

Positioning: strong practical exposure, with progressively increasing readiness for independent routine inspections and basic maintenance.

Work moved through the systems that authorise and supply it.

Maintenance is only as good as the permit that allows it and the material that arrives for it.

SAFETY PARTICIPATION

- Daily Operations toolbox meetings
- Weekly toolbox sessions
- Monthly Safety Council meetings
- Employee forums — all attended
- 1 Safety Beacon session handled personally
- Multiple safety observations raised
- PTW / TRA / LOTO applied to maintenance and contractor work

CONTRACTOR COORDINATION

I supervise contractors confidently across six disciplines:

- Painting
- Welding / fabrication
- Civil works
- Pump and valve maintenance
- Air-conditioning maintenance
- Corrosion control

Focus: develop project-planning capability

PROCUREMENT SUPPORT

30+

RFQs raised

10+

POs generated

TYPICAL MATERIAL HANDLED

- Maintenance grease
- Loading-bay gaskets

Evidence PTW / TRA / LOTO records · toolbox and Safety Council attendance

And Procurement records — RFQs, requisitions, POs

Every claim in this review traces to a record.

The strongest evidence available for the period, with the source named against each figure.

Sources Ultimo · monthly inventory reports · procurement records · PTWs · M&R shared folder · maintenance and project records

Three things went wrong, and what I changed because of them.

The recurring difficulty has been competing maintenance and administrative priorities landing at once.

AREA	THE CHALLENGE	ACTION TAKEN	OUTCOME
● Work-order tracking	Pending work orders were sometimes overlooked, which caused overdue closeout.	Use the original required completion date as an earlier tracking trigger, and follow up progressively rather than at the deadline.	More proactive work-order control
● Workload and time management	Maintenance, Ultimo, inventory, documentation and procurement can all converge at once.	Break work into smaller tasks, prioritise by urgency and impact, and start recurring deliverables earlier in the cycle.	Reduced task accumulation
● Record keeping	Documentation gets deferred while higher-priority work is being handled.	Upload records progressively as they are produced and develop a more structured filing routine.	Improved traceability and visibility

Key lesson: consistent task capture and early follow-up matter as much as technical execution.

Where I started, and where I am now.

Six areas, assessed against what I could actually do unsupervised on day one.

AREA	WHEN I JOINED	CURRENT CAPABILITY
● Technical knowledge	<i>Limited terminal familiarity</i>	→ Practical understanding of pumps, compressors, generators, valves, relief systems and other terminal equipment
● CMMS / Ultimo	<i>Zero prior knowledge</i>	→ Independent work-order creation, scheduling, PTW creation and follow-up
● Maintenance judgement	<i>Developing</i>	→ Faster identification of maintenance needs, with safety-critical and operational-impact items prioritised
● Safety systems	<i>Learning terminal-specific application</i>	→ Stronger understanding of PTW, TRA and LOTO as prerequisites to safe work
● Contractor management	<i>Limited exposure</i>	→ Comfortably supervise multiple contractor disciplines
● Operations interface	<i>Developing familiarity</i>	→ More confident communication and understanding of plant terminology and process lines

Overall progression: from learning the plant and its systems to managing key parts of the maintenance workflow with increasing independence.

Turning exposure into independent capability.

Six commitments, each one traceable back to a gap identified earlier in this review.

1

Technical independence

Perform routine inspections, checklists and basic maintenance with minimal supervision, continuing to use contractors for major and specialised jobs.

2

CMMS quality

Improve prompt work-order closure and review obsolete or redundant maintenance orders in Ultimo.

3

Digital inventory

Support the Microsoft Dynamics transition and strengthen real-time stock visibility.

4

Documentation

Upload records immediately as they are generated and explore practical automation for filing and routing.

5

Project planning

Develop stronger planning skills across scope, materials, contractors, schedule and closeout.

6

Professional growth

Complete or support closure of one major maintenance project and obtain a Maintenance & Reliability certification.

The outcome I am working toward: greater independent routine maintenance ownership, while strengthening the systems that keep maintenance safe, visible and controlled.

CLOSING PERSPECTIVE

Six months spent building a foundation that can be relied on.

Own

CMMS / Ultimo activities, with increasing independence

Control

Inventory and maintenance documentation, with better visibility

Support

Safe, timely execution across a broad range of maintenance activities

Develop

Deeper technical capability and stronger project-planning skills

Ready for greater responsibility, with continued development in technical independence, time management and documentation.

Thank you

Aniekeme Umoren

Maintenance Engineer

NAVGAS Limited

Maintenance & Reliability
